

Mobile Device Management powered by ubitexx

ubi-Suite supports iPhone, Symbian, Blackberry and Windows Mobile

**Press Release
March 3, 2009**

PRESS PREVIEW: “ubi-Suite world premiere”
ubitexx Business Room, Hall 3, Stand C21

At the world's largest IT trade show, CeBIT 2009, Munich-based software vendor ubitexx has announced plans to expand support for its ubi-Suite mobile device management system from Windows Mobile to include all other major mobile platforms: ubitexx will ship clients for iPhone and Symbian as well as a Blackberry connector. For the first time the ubi-Suite – winner of the German Internet Award 2008 – allows companies to administer all deployed mobile communication devices from a single point. Central management of all company handheld devices has been proven to deliver savings of up to 75 percent on support costs. ubi-Suite administers business cellphones and PDAs “over the air”: This also allows employee devices located within the company to be quickly and easily connected to the network. All company devices can now be equipped over-the-air with a security setup, secure E-mail push services and access to personal data (PIM) while meeting company requirements. Vital corporate data held by traveling employees are therefore always optimally protected. A further highlight: remote installation of mobile third-party applications from vendors such as NCP, Avira, utimaco and Siebel. ubitexx offers corporate customers various configurations for standard setups enabling fast and simple activation of VPN, virus protection, data

Mobile workers now have a choice because ubi-Suite makes every cellphone ready for business. Munich-based mobile device management manufacturer ubitexx is making its award-winning ubi-Suite solution available on all important mobile platforms.

encryption and CRM software on company-owned mobile equipment.

ubitexx is giving exclusive press previews of the multiplatform-capable ubi-Suite from March 3 – 5, 2009 at the ubitexx Business Room, Hall 3, Stand C21.

“We have been active in the mobile business since 2002, meaning we got in on the ground floor as a mobile device management manufacturer. Our experience shows that above all business managers, department supervisors, sales staff and support technicians use smartphones and business cellphones. These users have varying requirements for their mobile organizers in vest pocket format. For some senior managers reliability and security are key issues, whereas for other users design and cult status are more important than security and manageability. This latter point is underscored by the huge success of the iPhone at companies. In today’s corporate world we encounter PDAs, smartphones and business cellphones from different manufacturers and with different operating systems. ubitexx supports the flexibility of business users and companies by making our mobile device management solution ubi-Suite available on all major mobile business platforms. This makes it possible to raise employee motivation as well as substantially lowering support costs for their handheld inventory,” explains Markus C. Müller, President of ubitexx Inc.

Availability: The multiplatform-capable ubi-Suite is expected to be available by the summer of 2009.

About ubitexx

ubitexx develops and distributes innovative management and security solutions for enterprise smartphones and cellphones. As a technology leader, ubitexx offers system software for continuous support, first-time deployment and provisioning, policy and asset management of mobile devices.

Winner of several industry awards, the mobile device management solution ubi-Suite (German Internet Award 2008) accelerates smartphone configuration while enhancing the user experience and lowering support costs. Winner of the European ICT Technology Prize, the ubiControl module ensures seamless deployment of security settings and fulfillment of compliance requirements for mobile devices. Companies can fully benefit from the use of mobile devices while having the same level of security possible with desktop PCs.

Since the company’s founding in 2002, ubitexx solutions have been used throughout the world by leading banking, insurance, pharmaceuticals and energy groups, media companies, in the public sector and within the engineering and automotive industries.

ubitexx has its headquarters in Munich, Germany and a North American subsidiary in Cambridge, Massachusetts.
